INSTRUCTIONS

- Cleaning and degreasing with normal soiling
 - Apply HP Clean to the dirt or grime (always from below to above).
 - Rub in, rinse with water and rub dry.
- Cleaning and degreasing if heavily soiled
 - Apply HP Clean to the surface and allow to work in for +/- 5 minutes (depending on the degree of soiling).
 - When applied to vertical surfaces we recommend working from the bottom up.
 - In case of heavy soiling and porous surfaces, scour with a semi-hard brush.
 - Afterwards rinse with clean water.
 - Repeat if necessary.
- As a strong in-depth cleaner (e.g. oil stain in concrete)
 - Squirt Tec7 Cleaner on oil stain and allow to work in for min. 5 minutes.
 - Scour lightly with semi-hard brush and once again squirt with Tec7 Cleaner.
 - Allow to work in for a minimum of 5 minutes.
 - Now apply copious amount of HP Clean to the soiling and allow it to work in for a minimum of 5 minutes.
 - Scour lightly with semi-hard brush.
 - Once again apply HP Clean to the soiling and allow to work in.
 - Remove the dirty soap residues with clean water using a garden hose, or even better a highpressure cleaner.
 - If necessary, this treatment may be repeated.
