Product

Characteristics

Spray & PUR Gun can be used with most PUR foam spray cans which are currently available on the market.

The Spray & PUR Gun allows you to control the dosing of PUR foam. Joints are accurately filled as a result, and doors and windows are assembled in a quick, easy and safe way.

The long nozzle which can be extended further offers you the possibility to also work in hard to reach places.

You can quickly and easily clean the Spray & PUR Gun with the help of Spray & PUR Cleaner.

Use

- Check that the gun is in good working order.
- Shake PUR well before use.
- Screw the can quickly onto the gun.
- Squeeze the trigger in order to fill the loop.

Use the flow regulator wheel to regulate the flow. Clean the spray can valve and gun immediately after use with Spray & PUR Cleaner as prescribed for subsequent use. In cases of brief work stoppages, fully close the flow regulator wheel. Changes in the viscosity of the foam indicate poor sealing of the needle packing gland. In this case, remove the foam residues immediately with Spray & PUR Cleaner and firmly tighten the adjusting screw on the needle packing gland using an 8mm wrench to make sure the gland seals again. Test the free movement of the needle and lubricate, if necessary.
