Product

Characteristics

- Super is a cyanoacrylate-based fast curing adhesive.
- The bonding can withstand temperatures from -30°C up to + 100°C.
- Super glued joints have a high resistance to shear forces and shrink.

Applications

To bond the majority of materials tightly, such as: plastics (with the exception of, inter alia, P.E. and P.P.), rubbers, glass, plexiglass, ceramic, wood, leather, metals, etc.

Use Aktivator when bonding porous materials (cf. Super Aktivator).

Use

- Apply only on one side of a clean, dry, grease and dust-free surface.
- The thinner the adhesive layer, the stronger the bond.
- Press firmly together for a few seconds.
